

CLARIFY THE WATER.
PROTECT WHAT COMES NEXT.

Mercer International Inc.

SPINSTREAM™

SpinStream™ provides the final clarification stage after oil separation and solids capture, producing cleaner water that protects downstream treatment and prepares it for recovery, reuse, or discharge.

Clarity protects everything downstream.

Oil separation removes free hydrocarbons. Capture technologies remove suspended solids.

SpinStream™ completes the clarification process by polishing treated water before recovery, reuse, or final discharge.

Cleaner water means greater reliability, better downstream performance, and more value from every gallon processed.

CLARITY CREATES OPPORTUNITY.

Reduce Fine Contaminants

Removes the microscopic particles that remain after primary treatment.

Protect Downstream Systems

Cleaner water helps reduce fouling and improve equipment performance.

Improve Water Quality

Produces consistently polished water for recovery, reuse, or discharge.

Improve Operating Reliability

Supports stable operation while reducing maintenance demands.

Complete the Clarification Stage

Provides the final polishing step within Mercer's CATCH IT™ ecosystem.

CLARITY PREPARES WATER FOR WHAT COMES NEXT.

1

PREPARED WATER

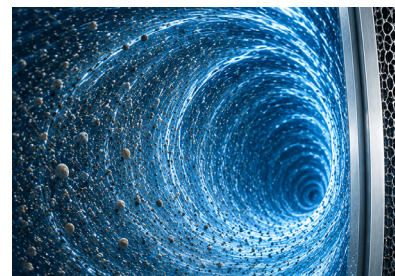

Fine contaminants remain after primary treatment.

2

SPINSTREAM™

Continuously clarifies water while resisting fouling.

3

POLISHED WATER

Cleaner water is ready for what's next.

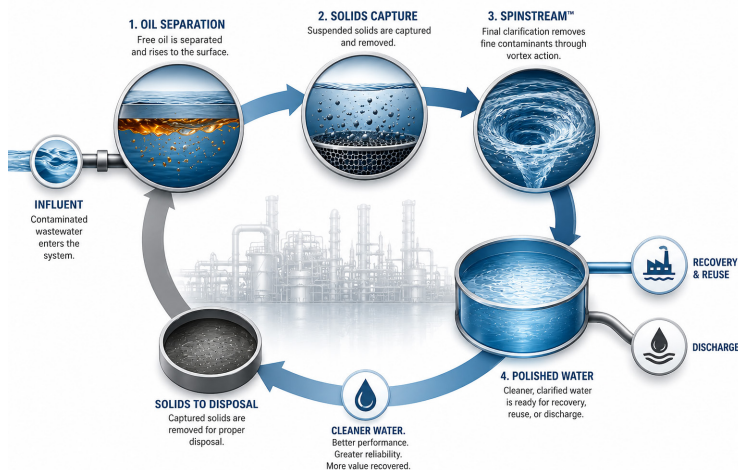

TREATMENT REMOVES CONTAMINANTS. SPINSTREAM™ DELIVERS FINAL CLARITY.

Oil separation removes free hydrocarbons.

Suspended solids capture removes larger particles.

SpinStream™ provides the final clarification step—producing cleaner water for recovery, reuse, or discharge.

After primary treatment, microscopic contaminants can still remain.

SpinStream™ polishes the water stream before it moves to its next destination.

Clarify more. Recover more.

BUILT FOR FINAL CLARIFICATION

- Industrial Wastewater
- Produced Water
- Refinery Operations
- Petrochemical Facilities
- Manufacturing
- Food Processing
- Process Water Reuse
- Membrane Pretreatment

Best applied where oil separation and suspended solids removal have already been completed, allowing final clarification to prepare water for recovery, reuse, or discharge.

FINAL CLARIFICATION COMPLETES CATCH IT™

Within Mercer's Integrated Treatment Ecosystem™, SpinStream™ represents the final clarification stage of CATCH IT™.

Positioned after oil separation and suspended solids capture, it delivers polished water that protects downstream treatment while preparing every gallon for recovery, reuse, or final discharge.

**CLARIFY MORE.
RECOVER MORE.
PROTECT WHAT COMES NEXT.**

Every treatment stage prepares the next. SpinStream™ ensures the journey continues with cleaner, more reliable water.

“

The cleanest water isn't the goal. Reliable treatment is.

Every wastewater stream behaves differently. That's why Mercer evaluates clarification performance, fouling potential, and downstream treatment compatibility using your actual process water before recommending a full-scale SpinStream™ solution.
